Create & manipulate objects In the desktop versions, AutoCAD lets you draw objects in the current drawing environment or export them to other drawing formats. Objects can be viewed in two ways: Graphically. You can move, scale and rotate an object, apply different visual effects and export it. Formats: DWF, X_DWF, DXF, DGN, RVL, SVG, PLT, VRML and PDF. By attributes. You can view or edit the attributes of the object using the attribute table. In AutoCAD for ArcGIS, you can use Autodesk® DWF as well as import DWF into a project. In addition, you can export DWF to Excel®. You can use DWF directly from the Windows® -based AutoCAD Software to send or open DWF files on a web server and share them as links to the Internet. The links also accept shared views in Word, PDF, Excel, PowerPoint® and Visio® format. Create a text box that is the same size as the current drawing area. Change the text box to a predefined font and font size, and you have created a graphic title. You can also create text boxes automatically. One example would be to create a text box at each new "world layer". Use the TEXT option to set the font style. The font style can be changed at runtime, by selecting a new font when the TEXT option is used. Double-click on the dynamic text to change the font size and the font color. A version of AutoCAD developed by MathWorks, AutoCAD LT, is available to users as a freeware download and to the public as a subscription-based software. AutoCAD LT lacks CADME and ProjectPlace functionality. It is offered as a client-only application, including collaboration features. AutoCAD Origin is an AutoCAD variant created by Sun Microsystems as a small, inexpensive alternative to the more expensive software package. In 1998, a special version was released for owners of the Apple Newton MessagePad. Autodesk bought Sun Microsystems' product line in 2002 and integrated the Macintosh version into AutoCAD in 2006. A special version of AutoCAD designed to run on the Apple Newton MessagePad is available. It is based on a port of the existing Macintosh version of AutoCAD, with specialized functionality for the device's handwriting recognition. Customization and automation Since the late 1980s, the implementation of database commands have resulted in a marked increase in the speed of AutoCAD as the ability to manage huge numbers of objects simultaneously was greatly improved. This allowed the creation of specialized databases that served to eliminate or considerably decrease the need to manipulate objects (by dragging or rotating them, for instance). However, database functionality was proprietary to AutoCAD and its tools. On December 10, 2003, the Open Database Connectivity (ODBC) group, which includes Microsoft and Sybase, and the DB2 consortium, which includes IBM and Oracle, announced the first specification for an open database connectivity standard. AutoCAD implemented ODBC functionality for more than three years. On July 10, 2007, the Open Database Connectivity Advisory Committee released OLE DB Services for AutoCAD, which is an ODBC standard-compliant interface to AutoCAD objects, a component of the AutoCAD 2007 release. On January 11, 2008, Autodesk announced that it would be deprecating the proprietary database technology for object manipulation. The decision was based on the success of the open database connectivity standard and Autodesk's desire to support a wider range of database vendors. The open database connectivity standard has been implemented by most other CAD applications. In addition to the standard file formats for 3D drawings (.3ds and .stp), AutoCAD supports many formats and can convert between most of them. These include the following: CAD (AutoCAD) format, which is an ASCII-based format that supports drawing a1d647c40b

In my community, trash collection is weekly, but my neighbor does the recycling one day a week. They also have a small compost bin, so we share in the material. What would the overall impact be if I was to add a food scraps collection to my community? How would it compare to my neighbor's arrangement, where they have their own collection for material that's not picked up by my community? Re: Community Composting (page 1) I don't see how it would be any different from your current arrangement, or your neighbors' arrangement. We have our own compost bins, and we buy a yearly supply of woodchips for a price equivalent to what our neighbor charges. What would the overall impact be if I was to add a food scraps collection to my community? How would it compare to my neighbor's arrangement, where they have their own collection for material that's not picked up by my community? I also don't understand the question. I'm curious as to the impact, since trash pickup is weekly and they have their own set up for collection. Re: Community Composting (page 1) So it was not clear from my question, but I am talking about the impact on the community - in terms of their waste disposal, for example. We do not want any food waste going to the landfill, but I'm assuming that this doesn't directly impact our trash disposal. I am also assuming that it would be cheaper for the community to have someone collect and compost for them, so I'm wondering if I should have someone doing this or not, based on the overall cost. Re: Community Composting (page 1) Quote from: yoyo I'm curious as to the impact, since trash pickup is weekly and they have their own set up for collection. I was thinking the same thing. It would seem that this would provide an additional service for the community, with people being able to compost in their back
