Doppler (predictive) – for faster edits on complex drawings. Quickly see your changes on the fly when making adjustments. (video: 1:25 min.) Drawing and editing performance has been optimized for even faster editing. You can now easily update, revise, and annotate your drawings in the browser. Create custom field tags in the 3D Modeling tab: Organize your drawings by using custom field tags to group them. With the new Markup Assist you can quickly incorporate feedback from printed paper or PDFs, no matter if they contain a pencil sketch, a freehand drawing, or a picture: From within the drawing environment, quickly import the feedback into the drawing, and add it to your model or design, without additional drawing steps. As an added benefit, annotate the feedback to your drawing with additional comments. If the PDF contains a dashed outline you can also add the dashes to your drawing. Drawings exported to PDF can also be imported, and annotated as described above. In the previous release AutoCAD also incorporated the Draw, Paste, Erase, and Markup Assist functionality in AutoCAD.
